

Lead Intelligence System

US Personal-Injury Law Firms · 5–50 attorneys · built on ScrapeGraphAI + gpt-4o-mini · runs locally, outputs a CSV

In one line: find PI law firms → fetch & qualify each site → identify the decision-maker and their email → verify it → score & rank → a clean CSV of outreach-ready leads. No agency, no Apify/Apollo seat, ~\$10–50/month.

The Pipeline — 6 stages

The Stack & What Each Piece Costs

Stage	Tool	Job	Cost / mo
Discover	Google Places API	Source firms (free tier covers volume)	\$0
Scrape / render	ScrapeGraphAI + Playwright	Fetch sites, beat Cloudflare/JS	\$0
Qualify + extract	OpenAI gpt-4o-mini	ICP gate, attorney count, DM name	~\$10
Find email	Free pattern-guess	Decision-maker address	\$0
Verify	SMTP + MX (built-in)	Confirm deliverability	\$0
Store	Local CSV	Lead list + dedup	\$0
TOTAL — lean / all-free sourcing			≈ \$10/mo

Three Ways to Run It (pick by budget)

Lean & free ~\$10/mo - Google Places + free finder - Free SMTP verification - Best \$0-extra coverage - Lower email hit-rate on catch-all firms	Apollo source cheapest leads ~\$12–15/mo - ExportApollo ~\$3.49/1k leads - Free SMTP verification - Name+email+website in one CSV - Unverified; coverage on tiny firms varies; manual batch export	Hunter source highest quality ~\$45–60/mo - Hunter Starter (2,000 finds) - Auto-verified on arrival - API, fully automatable - Best for catch-all / Google-hosted firms
--	--	---

Sourcing: Google Places vs ExportApollo

	Google Places	ExportApollo
Gives	Firm + website + phone	Firm + website + decision-maker + email
Cost	Free tier	~\$3.49 / 1,000 leads
Emails	None (we find them)	Included but unverified
Delivery	Live API	CSV by email, 8–36h (manual)
ICP precision	High (we re-check attorneys from site)	Headcount counts staff, not attorneys — re-check needed
Best for	Automated, accurate local firms	Cheapest bulk leads, tolerant of manual step

Recommended start: run a **\$2 / 500-lead ExportApollo test** through the pipeline and measure two numbers — % that are genuine 5–50 *attorney* PI firms, and % of emails that pass verification. If both look good, Apollo becomes the cheap primary source; if coverage on small firms is thin, keep Google Places primary and use Apollo to fill gaps.

Run It

Step	Command
------	---------

Discover + qualify + score

```
python -m lead_engine.run
```

Find + verify contacts

```
python -m lead_engine.verify_contacts
```

Import an Apollo CSV

```
python -m lead_engine.import_apollo <file.csv>
```

Output → `lead_engine/output/leads.csv` · re-running is safe (dedup) · each lead carries its practice-area type, score, tier, decision-maker, and verified email.
